

About

ANDALÒ GIANNI specializes in high-precision custom manufacturing, offering advanced machining processes such as turning, multi-axis milling, grinding, EDM, and laser processing of traditional and new materials from prototype to small production series. The company works with a wide range of metals and technical ceramics, often combining them with complex mechanical processing. Equipped with CAD-CAM stations and an air-conditioned metrology room, ANDALÒ GIANNI provides technical support from design to production. Since the 1990s, it has supplied major aerospace groups, contributing to projects like LISA Pathfinder and CHEOPS.
